

ICTS Synopsis Seminar

Title : Channel flow stability: influence of dust particles and geometry

Speaker : Anup Kumar (ICTS-TIFR, Bengaluru)

Date : Wednesday, 09 October 2024

Time : 11:00 AM (IST)

Abstract : The stability of channel flow is profoundly influenced by the introduction of dust particles and alterations in wall geometry. Though one system involves a small addition of particles to the flow and the other features slight geometric modifications, they are fundamentally different, displaying markedly distinct stability behaviors. Despite this, they share common underlying physics, with their stability controlled by critical layer dynamics. In this talk, I will discuss how the presence of dust particles and the modifications in wall geometry impact flow stability, with a particular focus on the underlying mechanisms driven by critical layer dynamics.

Venue : Madhava Lecture Hall
