## Duality for $C^*BA$ : index of four lectures

Lectures 1 & 2 (Algebra)

1. Poincaré duality; examples
2. Group cohomology; examples
3. Benson-Carlson duality; examples
4. Local cohomology; properties, examples
5. Gorenstein duality; examples
6. Statement of the local cohomology theorem (LCT)
7. Proof of the functional equation.
8. Proof of LCT (modulo multiperiodic resolutions)
9. Multiperiodic resolutions (via products of spheres via supports)
10. Sub Hopf algebras of the Steenrod algebra

Lectures 3 & 4 (Topology)

11. Context. Definition of  $\text{Gor}^a$  &  $\text{Gor}D^a$
12. The two contexts; algebra &  $C^*(X)$ .
13. Statement of the theorem
  - $C^*BA$  is  $\text{Gor}^0$ , has  $\text{Gor}D^0$  & a LCT<sup>0</sup>
14. Strategy of proof
15. Montu theory;  $p$ -torsion abyp
16.  $k$ -cellular approximation & dc completion
17. Proof of  $\text{Gor}^0$  for  $p$ -group (via Montu theory)
18. Proof of  $\text{Gor}^0 \Rightarrow \text{Gor}D^0$  (via Montu theory)
19. Proof of  $\text{Gor}^0$  via ascent from  $U(n)$ ,  $U(n)/G$
20. Algebraic cellularization
21. Extensions to other groups
22. Rational spaces
23.  $k_u$  &  $k_o$  (transferring rel  $\text{Gor}$ )
